

Falcon Muster and Evacuation system

Synel Industries latest solution for an online accounting of personnel & visitors during muster and emergency evacuation.

In case of emergency, personnel and visitors muster at designated areas. Falcon provides online headcount of mustered cardholders. If the emergency escalates to an evacuation, the same terminals can be used to count evacuated personnel. The solution also allows the account of Emergency Personnel (fire brigade, ambulance, police) giving a true figure of who is on site.

The Falcon Muster & Evacuation System also allows the muster and evacuation of individuals to be carried out manually at the computer.

Reports provide accurate data of:

- when and where personnel mustered.
- who has and who has not mustered or evacuated
- personnel last known location

Radio modem communication will provide the link to those remote muster points. If power is not available, battery back up is provided.

Falcon Pro Software

Falcon is the heart of our access control and security solution, compatible across the most popular platforms. Falcon is a true 32 bit application. It allows the absolute monitoring of all access control transactions in real time; INs, OUTs, alarms, lost cards, reports and much more functionality is embedded into this broad flexible and user friendly application.

Falcon is used in many high security installations, in military, government and industrial buildings around the world.

Falcon can be fully integrated directly with CCTV in your digital environment giving absolute cover to your property. Using our PRO module Falcon can also produce all of your security ID cards directly from the database.

Synel Hardware

For hardware you can use one of Synel's many hardware terminals. Contact-less reading technology is recommended for quick and reliable reading time. We can also combine Biometrics technology using Fingerprint readers.
