

Field Management

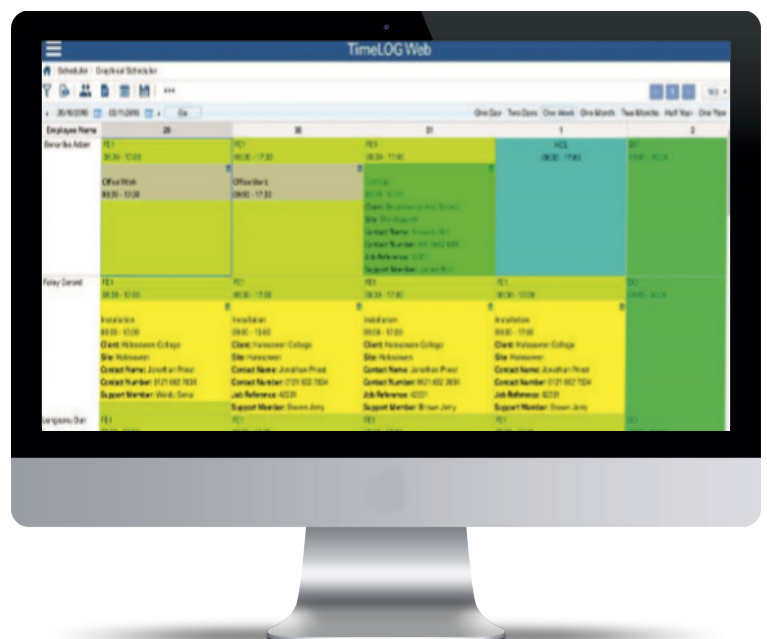

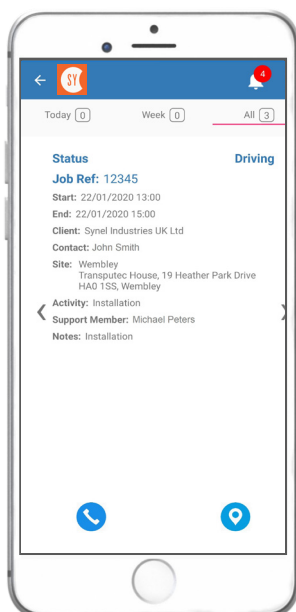

Improve efficiency, reduce costs and increase productivity with Synel's Field Management Module.

Plan, Manage and Track your workforce.

Part of Synel's Workforce Management product suite, Synel's Field Management solutions bring monitoring activities to the field by enabling your business to track, manage and schedule your field based employees in one solution to streamline time management of your workforce and maximise efficiency.

Field Management Solutions catered for your business.

Whether your business manages a team of field engineers or a mobile sales force, Synel's Field Management module can be optimised to suit any business size or type – from Plumbing, Electricians and Facilities Management to Maintenance, Builders and field based sales and surveying teams.

Track your Field Workers via geolocation tagging

Synel's Field Management module lets your business track individual field employees via geolocation tagging. Using Synel's web application and the mobile app, field workers can check in to jobs, so that businesses can track time spent on travel, jobs, location, statuses and manage day to day scheduling. Geolocation tagging also allows businesses to plan their field workers activities to maximise efficiency and minimise overheads.

Schedule jobs and tasks and reschedule to improve efficiency

With Synel's module your field employees can be co-ordinated in real time, to maximise efficiency of your workforce and streamline time management of your field workers. With the assistance of Geolocation tagging and realtime notifications your business can reschedule jobs to field workers who are nearby to your next job, which not only improves service and response times to your customers but maximises your workforces output. With the reduction in travel time for your field workers, this will also save overheads such as fuel costs but also allow your business to take on extra jobs, meaning better profitability.

Manage jobs, build jobsheets and speed up invoicing all via one easy to use module, eliminating paperwork

Synel's Field Management module lets you build job schedules, quotes, work orders and speed up the invoicing process. No paperwork for your customer, no paperwork for your company. Perfect for operational businesses such as maintenance, plumbing companies and contractors.

Track your Field Workers via geo-location tagging

Synel's Field Management module lets your business track individual field employees via geo-location tagging. Using Synel's web application or the mobile app, field workers can check in to jobs, so that businesses can track time spent on travel, jobs, location, statuses and manage day to day scheduling. Geo location tagging also allows businesses to plan their field workers routes to maximise efficiency and minimise overheads.

Reporting

Working as part of Synel's job costing & activities solution, your business can also track work output using Field Management on a daily, weekly, monthly or even annual basis to help monitor your businesses profit and loss and have a clearer picture on your ROI for forward planning.

Live notifications via the desktop application

Whether your field team are on the go, delayed or had to overrun on their allocated job time, Synel's Field Management module will automatically alert you with live notifications to allow you to plan and foresee problems that may require your attention to maximise customer satisfaction.

- Works in conjunction with Synel's powerful mobile device application to offer access 24/7 by field workers
- Streamline management of office workers and field workers in conjunction with other modules within Synel's Workforce Management Web Application.
