

How to clean and disinfect biometric devices

Product disinfecting recommendations:

- Use rubbing alcohol (containing 70% Isopropyl alcohol) and a clean, non-abrasive cloth - such as a lens wipe or microfibre cloth.

- Moisten the cloth or wipe with a suitable amount of rubbing alcohol and gently clean the surface of the fingerprint sensor.

Caution:

- Be sure to read the instructions and handling precautions on the bottle of the rubbing alcohol before use.
- Be careful not to get rubbing alcohol into the product when cleaning the surface of the product. Rubbing alcohol should only be applied to exposed surfaces.
- Contact Synel for details on approved cleaning products if unsure.
- Do not use a cleaner with abrasive properties on painted or plastic surfaces.
